# Faculty Senate meeting, 3-13-18 Consent Agenda - Course Proposals

| | |
|---|---|
| **Committee** | Faculty Senate |

| | |
|---|---|
| **Notes** | These course proposals were approved at the college level and Graduate Council (where needed) and were approved by the Faculty Senate Academic Affairs committee during their February meetings. |
| | The FS Executive Committee approved placement of these proposals on the  FS agenda.  Once approved they will be moved on to the final implementation stage.  These are course proposals and therefore do not need KBOR approval. |
| | To view a course proposal, with markup, you must choose "view proposal" (not just the summary) and then in the right hand column under "User Tracking" you must select "show current with markup" from the drop down options. |

| | |
|---|---|
| **Short Title*** | Environmental Anth |

| | |
|---|---|
| **Credit Hours/ Units*** | 3 |

| | |
|---|---|
| **Course Description*** | Explores anthropological and human science approaches to the complex causes and consequences of environmental change, including climate change, mass species extinction, industrial pollution, and deforestation. Students learn about economic, cultural, and political drivers of environmental degradation and discuss solutions for a more sustainable future from the perspective of social and cultural theory. |

## Rationale and Impact

**Rationale***   Students in this new class will learn how anthropological concepts and theories aid understanding and adaptation in a time of profound environmental change.  The professor teaching this course is a newly hired TT cultural anthropologist with expertise in this subfield, and this will be one of his regular elective courses.  When this course was taught by a visiting instructor here at K-State in the past, it was very successful, with a lot of interest generated for majors and others.

## Rationale and Impact

**Rationale***

The university does not currently offer a course on world
religions.
There is strong wide-spread interest in religion among

students.
Many people have strong misconceptions about and biases
against different religious beliefs and practices.
Religious traditions of the world have a significant impact on
economics, politics, society, and art.  A strong general
education background should involve the study of these
traditions.

**Impact Report**

**Impact Statement (i.e. if this impacts another unit)**\* This course complements other more specific courses across the campus
by providing a broad overview of religious traditions around the world.
Courses it would complement include:

Intro to Philosophy of Religion
Philosophy of Religion
Anthropology of Asian Religions
Religion in Culture (ANTH 618)
History of Christianity
Women and Religion (GWSS 580)
Sociology of Religion (SOCIO 643)
Religion in Culture (ANTH 618)

## Rationale and Impact

| Rationale | This proposal seeks to have GRMN 528 "Intro to German Linguistics" added to the list of approved courses in (partial) fulfillment of the social science basic requirement fo the College of Arts and Sciences.  The university course catalog (accessed in 02/28/2016 here: http://catalog.k-state.edu/content.php?catoid=12&navoid=1286) states: "The requirement in the social sciences improves the student's ability to analyze and understand human social systems" and "Purpose: to acquaint students with the adaptation of scientific method to the analysis of human social systems." Within the list of approved courses it states: "The fourth course must be form the above areas or from: ...Linguistics - any course except LG 601."  It is based on the acceptance of any linguistics courses (aside from LG 601) that this porposal is being submitted.  The course GRMN 528 is a general introduction to the study of language as system of human communication, with particular focus on the German language.  The proposal also seeks to add the K-State 8 tag: social sciences for the same reasoning.  This proposal also makes a few other minor changes (e.g. a change in pre-requisite).  It should be noted that GRMN 528 is taught in German and the textbook is written in that language, but that the linguistics concepts learned (phonetics, morphology, syntax, etc.) apply to the scientific study of any language. |

| **Course Description*** | Detailed investigation of a particular theme, event, or problem in history. |

## Rationale and Impact (NEW)

**Rationale***

The History major requires 21 hours of upper level courses (300 level or above), yet we offer very few courses other than 500 level to meet that requirement.  Offering new Topics Courses at the 300 level will bring the major more in line with our existing requirements.  We also expect the new tier of appealing, general interest, topics course to reach students who are seeking courses to meet their required 45 hours at the 300 level or above.  We also believe that students may find the new courses more appealing than the broad introductory 100- and 200- level survey courses in World, Western, and US history, which many of them take for K-State Eight credit.

# MUSIC - 118 - Jazz Ensemble Lab A

## 2017-2018 Appendix A: Course Form - New

| | |
|---|---|
| **Course Description*** | An intermediate level college jazz ensemble.  Examine and perform various jazz ensemble pieces selected from extant literature which may include cool, swing, hard bop, bossa, Latin, samba, funk/rock, and other styles. |

### Rationale and Impact (NEW)

**Rationale**\* The rationale for this change is to provide unique course numbers to Collegiate Jazz Ensemble (CJE) and Jazz Lab A. Currently they are both considered small or chamber ensembles and have the same course number and cannot be differentiated on transcripts. This is incongruent with how the ensembles function in the professional world and how our graduates will interact with them during their time in the profession. Furthermore, using unique numbers will allow the advisors and directors to track their enrollment and meeting of expectations in the jazz minor and iterations of the BM degree. We are looking to change the course number and distinction; however, all aspects of the ensemble, class, and programs will remain intact and the same.

**Impact Statement (i.e. if this impacts another unit)**\* This change will not impact any units as it is just changing the course number for advising and program purposes.

## Rationale and Impact (NEW)

**Rationale\*** We are creating Piano Class III to streamline and more effectively lead students to proficiency of their keyboard skills within all degrees in the School of Music, Theatre, and Dance. Currently, there are only two piano classes and class piano two can have a wide range of knowledge and skills which leads to a massive differentiation of instruction. Creating Piano Class III will allow the professor to better impact student learning in a more effective learning environment.

**Impact Statement (i.e. if this impacts another unit)\*** This will have no impact on any other academic unit. The Director of the School of Music, Theatre,and Dance was contacted on 08/07/2017 and supported the keyboard division's proposal to modify the Poano Class curriculum to include Piano Class III.

|---|---|---|---|

| Rationale for K-State 8 tag | The course is a social science-based introduction to understanding relations between agriculture, food, and society, drawing significantly on social theory and empirical evidence from the social sciences. The course affords students significant opportunities throughout to engage with ethical reasoning and the challenges associated with the social and environmental implications of the food system. |

| | |
|---|---|
| **Course Description*** | The class presents the theory and algorithms for linear and nonlinear optimization problems with continuous variables.  Topics covered include convex analysis, first- and second-order optimality methods, duality, KKT conditions, algorithms for unconstrained optimization, linearly and nonlinearly constrained problems, and convergence rates of algorithms. The theory and algorithms are applied to data science problems arising in machine learning, statistics, and related fields (e.g., maximizing likelihood and penalized likelihood functions, MM algorithms, EM algorithms, model selection, Sparse PCA). Students are expected to be comfortable with rigorous mathematical arguments. |

## Rationale and Impact

| | |
|---|---|
| **Rationale**\* | With the ongoing rise in computing power, there is a corresponding rapid growth in the areas of statistical modeling and analysis. Most of the growth is in the area of computational modeling, which has optimization as its |

foundation.  This course will prepare our students with the necessary foundations to fully appreciate modern statistical modeling.  Expertise of the current faculty, coupled with student demand, would allow research and instructional enhancements consistent with the discipline.  Importantly, this course represents a significant applied component in the proposed Data Science and Analytics track for our MS program.

| **Long Course Title** * | Discrete Optimization and Scalability for Data Science |
| **Short Title** * | Scalability for Data Sc |
| **Credit Hours/ Units** * | 3 |
| **Course Description** * | Topics covered include computational complexity, NP-hardness, data as networks, graph theoretic algorithms, exact, approximation, heuristic and online algorithms, and connections between convex and non-convex optimization problems. The theory and algorithms are applied to data science problems arising in statistical machine learning, statistical clustering, design of experiments, observational studies, sampling, and variable selection. Applications may be motivated using data from social networks, search engines, the stock market and elections. |

## Rationale and Impact

| Rationale* | Increases in computing power has caused a surge in the availability of data. This second course in optimization for data science has a focus on algorithms for data analysis when there are many units. Knowledge of |

computationally efficient statistical methods is essential for effective analysis of this "big" or "massive" data.  This course gives students a survey of modern tools for big data analysis and equips students with the background necessary to understand the computational complexities motivating these methods.  Expertise of current faculty, coupled with student demand, would allow research and instructional enhancements consistent with the discipline.  Importantly, this course represents a significant applied component in the proposed Data Sciences and Analytics track of our MS program.
