January 2018 KBOR Report
From Faculty Senate President Brian Lindshield

Since there hasn't been a KBOR report for a few months, I wanted to try to capture what has been happening over that time. The Council of Faculty Senate Presidents had lunch in January with the regents the primary topics of discussion were alternative math pathways and open/alternative educational resources. Alternative math pathways, quantitative/mathematic course options to College Algebra, are being implemented in other states, particularly for degrees/curricula that do not require a heavy quantitative skills or many additional mathematics requirements. This is a result of questions about the relevance of College Algebra concepts to these students and partially related to the student success rates in the course. It would be up to programs to choose whether to include this new course in their degrees/curricula. We talked about establishing an alternative math pathway course at the core outcomes meeting and suggested following the Dana Center Mathematics suggestions on how to complete this process so that there could be a standardized course that would transfer. I gave a presentation to the System Council of Chief Academic Officers on the potential of a system-wide Open/Alternative educational resources initiative highlighting that many other systems are doing this that was well received. We had process language approved for how to handle when there is a desire to change an AP/CLEP score. The University of Kansas revised an out-of-state scholarship proposal to instead discount tuition for high performing students, proposing to use revenue generated for need-based scholarship for in-state students. I believe this is the second tuition discounting approved, following Emporia State's proposal last spring. There has not been much discussion about the 120 hour degree process in meetings that I've been in, but I know that they are preparing to submit the degree programs that are proposing to stay above 120 hours soon.
